

Coiled Tubing (CT) Downhole Tools

Overview

LATEV ENGINEERING SERVICES LTD is pleased to announce our latest service offering from our technical partners Marlin Oil Tools. These tools are integral to modern **well intervention and completion operations**, offering efficient, pressure-controlled solutions that can be deployed using continuous coiled tubing—without interrupting production.

This comprehensive tool line is engineered for performance, safety, and adaptability in challenging downhole environments, and is ideal for both **onshore and offshore applications**.

Key Product Categories and Capabilities

1. Connectors

High-integrity mechanical solutions for connecting coiled tubing to tools or splicing segments.

2. Basic Tools

Tools that improve operational control, tool string functionality, and wellbore cleaning:

3. Bridge Plugs

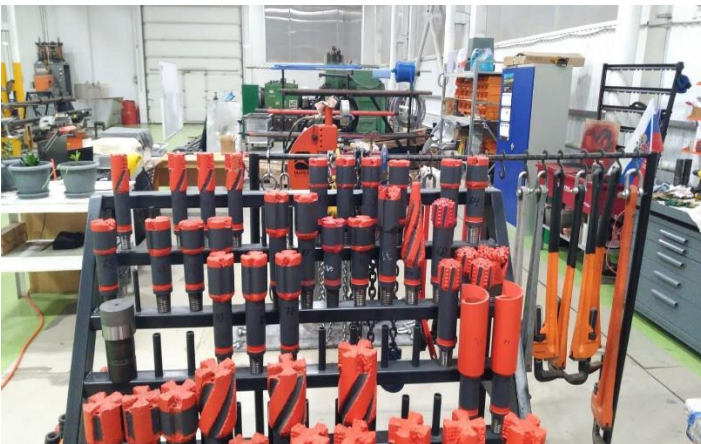

Reliable solutions for wellbore isolation during interventions:

4. Fishing Tools

Precision-engineered tools for retrieval of lost or stuck equipment.

5. Mills & Impression Tools

Effective solutions for milling obstructions and identifying downhole features:

Key Benefits

- **Live Well Operations** – Enables intervention without halting production.
- **Cost & Time Efficiency** – Reduces downtime and speeds up execution.
- **Pressure Control** – Safe deployment under pressurized well conditions.
- **Compact & Versatile** – Ideal for space-limited or offshore locations.
- **Customizable Solutions** – All tools are adaptable to meet specific client needs.
